The synthesis and biological activity of a series of 2'-substituted uridylates are described.

The compounds were found to have potent antiviral activity against human immunodeficiency virus (HIV).

The results are discussed in terms of the mechanism of action of these compounds.

Keywords: poly(uridylate), 2'-substituted uridylates, antiviral agents, human immunodeficiency virus.

Give up on applying to schools

Apply to another school

Jim,

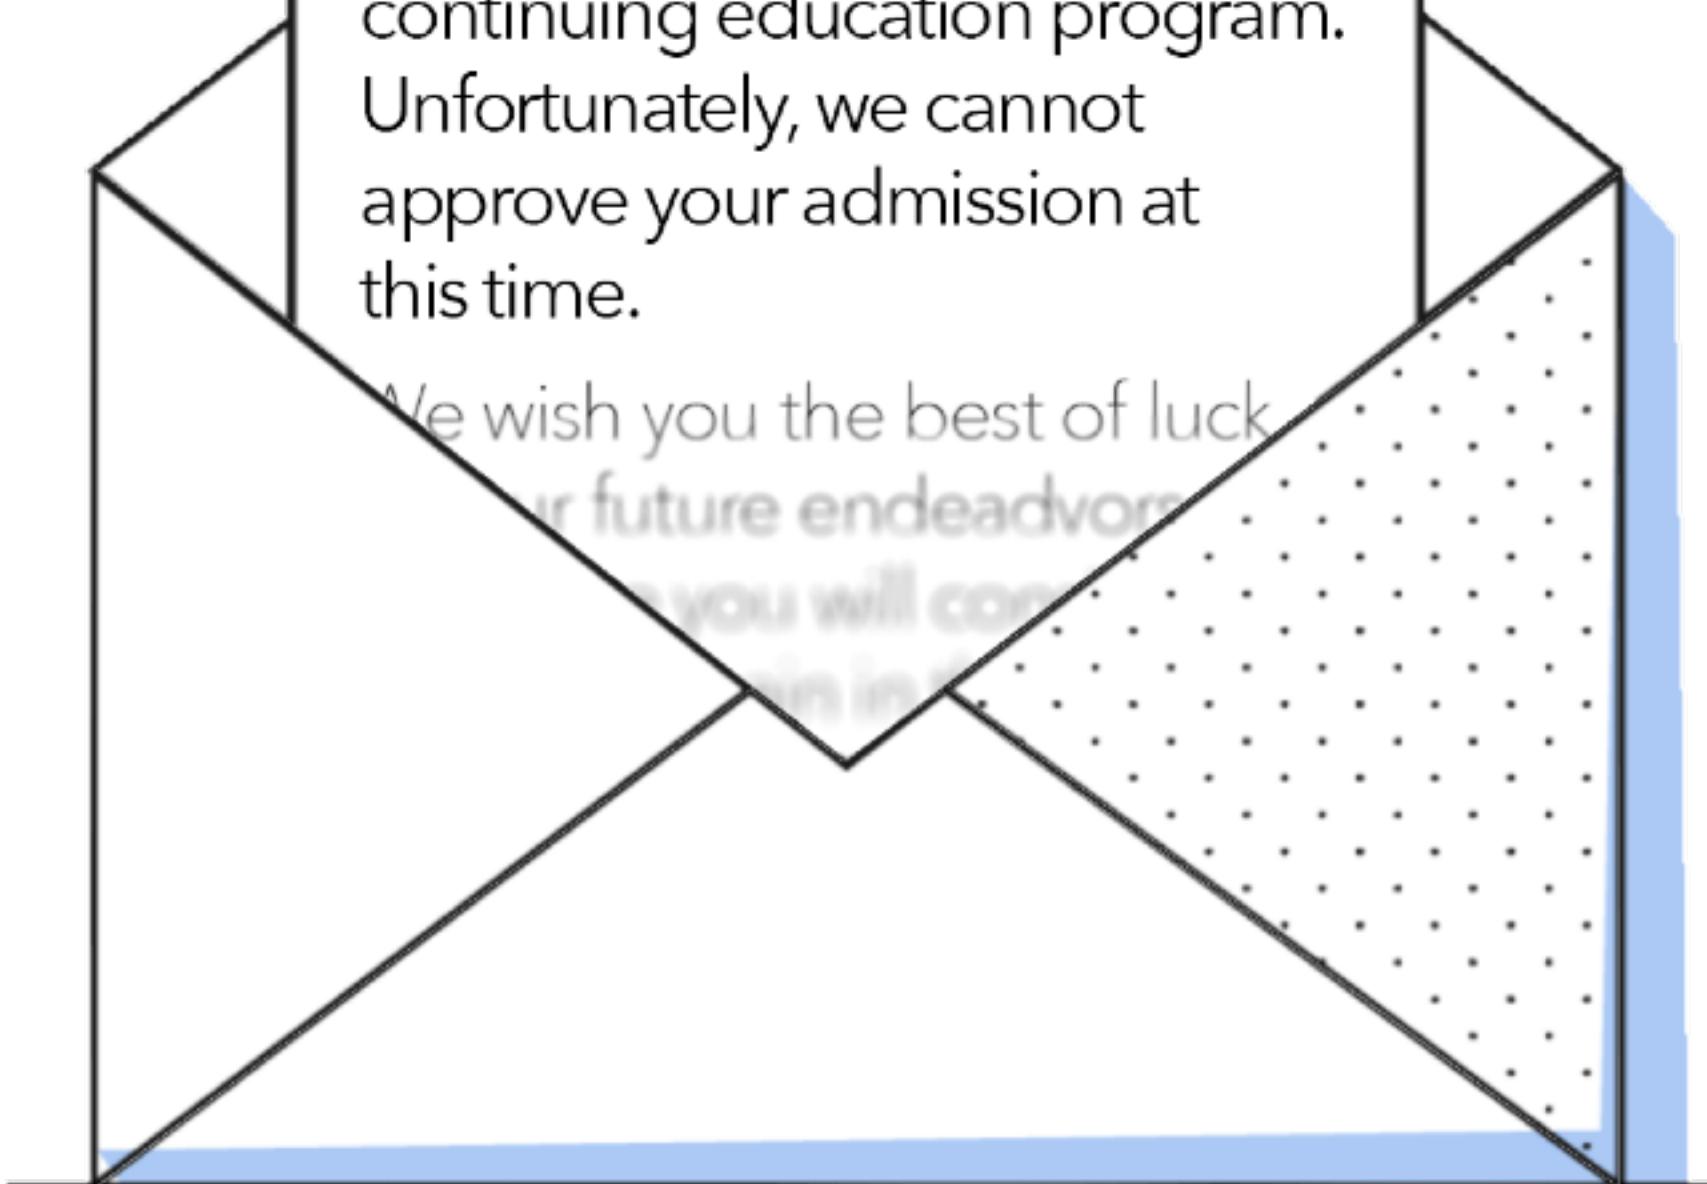

Thank you for applying to the continuing education program. Unfortunately, we cannot approve your admission at this time.

We wish you the best of luck

in your future endeavors.

You will continue to

achieve great things.

The school you applied to is among the 72% of colleges and universities that use background checks to screen prospective students. They might not say it, but you are pretty sure that you were denied because of your record.
